Prop 84 Update

September 22, 2021

Well Phase:

Abundant Water Wells has advised that all material is ordered and that they are working to schedule installation of pumping equipment.

Reservoir Phase:

District has received WaterBoards approval of final change order for Cora Constructors portion of project and payment of retention has been sent to Cora, completing the Reservoir Phase.

Treatment Plant:

District, REVE and E&EC are working to resolve change orders and close out treatment phase. Backwash plugging appears to be returning and it has been suggested that we perform backwashes without the diffusers being installed to clear the vessels of fines. Staff will be installing a platform between the 2 vessels to make servicing the vessels safer and more efficient prior to opening vessels and removing diffusers.

District Construction Activities:

District staff has replaced the failed booster at the Montclair site and also moved the new backwash pump to replace the second Montclair booster. Piping has been installed to direct water from boosters to filter backwash inlet allowing backwash water to be supplied by boosters.

Financial Update:

Claim 42 has been submitted to WaterBoards for review and payment.

SYSTEM STATUS

September 2021

- Montclair well remains the sole source for entire system.
- For the month of September to date (9/21/21), Montclair well is averaging 9.12 hours per day supplying an average of 17,826 gallons per day. Average pumping for August was 18,108 gallons per day.
- Montclair well continues to function normally with no issues. Pumping and static levels continue to drop but appear to be leveling off as demand begins to drop. On August 28th, the static water level was 260 feet and pumping water level on August 30th was 271 feet. On September 21st, static water level was 262 feet.
- No flushing was performed in August.
- Monthly bacteriological sampling for September was completed in compliance with the combined system BSSP. All samples were negative for coliform and e. coli.
- Fe and Mn samples continue to indicate N/D levels post filtration.
- On August 26th while preparing to install valve boxes on Pretoria, it was discovered that a glue joint to one of the new valves installed on June 29th was leaking approximately 700 gallons per day and it is suspected that it has been leaking since installation. The surrounding soil was dry enough to absorb all the water and it never appeared at the surface to allow discovery. This leak would account for a total water loss of about 42,000 gallons during this period.
