DROUGHT UPDATE

This summer is shaping up to be long, hot and dry-just the opposite of what we need to help get us out of the current drought! With little to no change in the current weather pattern forecast for the foreseeable future, it looks like the drought situation will worsen.

District staff will be drafting drought plans to include water use restrictions for possible implementation if our water supply becomes overstressed. The drought restrictions will be presented to the Board of Directors at upcoming meetings for discussions and adoption.

Until we adopt drought plans, please do your part and avoid wasting water by fixing any leaks as soon as possible and avoid letting water run unnecessarily.

Thank you for your cooperation and we will keep you updated as the situation develops.

NEW DISTRICT EMPLOYEE

Please join us in welcoming Izzy Villafana to our team as a Service Worker II. Izzy brings a background in electrical and general construction work and is eager to learn about the operation of our water system.

VANDALISM OF FACILITIES

It has been some time since we have experienced a vandalism issue but we found a damaged sample station last week. It appears that it was pried open, probably just to find out what was in it. This instance is particularly troubling since it occurred behind a locked gate with limited access and since there was no sign of any forced entry through the gate, it had to be someone with a key! Senseless damage like this costs all of us so please let us know if you see anyone tampering with District facilities.

LEAD AND COPPER SAMPLES

District staff is preparing to deliver another round of lead and copper sample containers to our residents that assist us with collection (samples are taken from an inside faucet). These samples provide us with information on the amount of lead and copper that may be leaching into the water inside your home from your plumbing fixtures and from any fittings in the water system that may contain lead or copper.

If you wish to be included in the sampling, please call the office at (661) 822-1923.
